

## CLINICAL POLICY AND PROCEDURE MANUAL

Policy Number: PA.216.CC  
Last Review Date: 07/27/2021  
Effective Date: 10/12/2021

### PA.216.CC – Car-T Therapy Policy

#### Summary:

Cancer immunotherapy is treatment that uses a patient's immune system to attack tumors. One type of cancer immunotherapy is Chimeric antigen receptor (CAR) T-cell therapy. This therapy takes T-cells from a patient's blood, then using a disarmed virus, the T cells are genetically engineered to produce receptors on their surface called chimeric antigen receptors, or CARs. These special receptors allow the T cells to recognize and attach to a specific protein, or antigen, on tumor cells. The final step is the infusion of the CAR T cells into the patient (which is preceded by a "lymphodepleting" chemotherapy regimen). The CAR T cells recognize and kill cancer cells that harbor the antigen on their surfaces.

#### Side Effects

Like all cancer treatments, CAR-T Cell Therapy has potential side effects, which are sometimes fatal. One of the most common side effects of CAR-T Cell Therapy is Cytokine Release Syndrome (CRS). CRS can result in severe nausea, high fevers and large drops in blood pressure due to the massive release of cytokines into the bloodstream; this side effect can be managed with standard therapies to treat inflammatory conditions, including steroids.

Another potential side effect of CAR T-Cell Therapy is a mass die off of B cells, known as B-cell aplasia. Patients with B-cell aplasia must receive immunoglobulin therapy, which provides with the necessary antibodies to fight off infections.

There is the potential for neurotoxicity, from cerebral edema to confusion or seizure-like activity. Other serious side effects include allergic reactions during the infusion, electrolyte abnormalities and low blood cell counts.

This policy includes:

- Tisagenlecleucel (Kymriah)
- Axicabtagene Ciloleucel (Yescarta)
- Brexucabtagene Autoleucel (Tecartus)
- Lisocabtagene maraleucel (Breyanzi)
- Idecabtagene vicleucel (Abecma)

#### Tisagenlecleucel (Kymriah)

KYMRIAH is a CD19-directed genetically modified autologous T-cell immunotherapy indicated for the treatment of:

1. Pediatric and young adult patients (up to 25 years of age) with B-cell precursor acute lymphoblastic leukemia (ALL) that is refractory or in second or later relapse.

## PA.216.CC Car-T Therapy

Policy Number: PA.216.CC  
Last Review Date: 07/27/2021  
Effective Date: 10/12/2021

- a. Member has experienced disease relapse after allogeneic stem cell transplantation (SCT) and member is  $\geq 6$  months from above transplantation at the time of infusion; OR
  - b. Member has relapsed/refractory Philadelphia chromosome-negative B-ALL that has progressed after 2 cycles of a standard chemotherapy regimen for initial diagnosis OR after 1 cycle of standard chemotherapy for relapsed leukemia; OR
  - c. Member has relapsed/refractory Philadelphia chromosome-positive B-ALL that has progressed after failure of 2 prior regimens, including a Tyrosine Kinase Inhibitor (TKI)-containing regimen.
2. Adult patients with relapsed or refractory (r/r) large B-cell lymphoma after two or more lines of systemic therapy including diffuse large B-cell lymphoma (DLBCL) not otherwise specified, high grade B-cell lymphoma and DLBCL arising from follicular lymphoma.
    - a. Members must have previously received at least two lines of therapy, including rituximab and an anthracycline (for DLBCL) AND
    - b. Either having failed autologous Hematopoietic stem cell transplantation (ASCT) or being ineligible for or not consenting to ASCT.
- Member must present CD19 tumor expression.
  - Member must not have received prior CD19-directed chimeric antigen receptor (CAR) T-cell therapy.
  - Delay tisagenlecleucel infusion if patient has unresolved serious adverse reaction from preceding chemotherapies (e.g., pulmonary reactions, cardiac reactions, hypotension), active uncontrolled infection, active graft versus host disease (GVHD), or worsening of leukemia burden following lymphodepleting chemotherapy.
  - Tisagenlecleucel is available only through a restricted program under a Risk Evaluation and Mitigation Strategy (REMS) called the KYMRIAHS REMS. Information is available at [www.kymriah-rems.com](http://www.kymriah-rems.com) or 1-844-4KYMRIAHS

### Axicabtagene Ciloleucel (Yescarta)

YESCARTA is a CD19-directed genetically modified autologous T cell immunotherapy indicated for the treatment of:

1. Adult patients (18 years of age or older) with relapsed or refractory large B-cell lymphoma after two or more lines of systemic therapy or disease progression or relapse less  $\leq 12$  months after autologous stem-cell transplantation (ASCT); including diffuse large B-cell lymphoma (DLBCL) not otherwise specified, primary mediastinal large B-cell lymphoma, high grade B-cell lymphoma, and DLBCL arising from follicular lymphoma.
2. Adult patients with relapsed or refractory follicular lymphoma (FL) after two or more lines of systemic therapy that must have included a combination of anti-CD20 monoclonal antibody (e.g. rituximab); and an alkylating agent (e.g. bendamustine, cyclophosphamide) containing regimen; or disease progression or relapse less  $\leq 12$  months after autologous stem-cell transplantation (ASCT). This indication is approved under accelerated approval based on

Last Review Date: 07/27/2021  
Effective Date: 10/12/2021

response rate. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trial(s).

- Member must present CD19 tumor expression.
- Member must not have received prior CD19-directed chimeric antigen receptor (CAR) T-cell therapy.
- Member must not have evidence of active infection or inflammatory disorders
- Axicabtagene ciloleucel (Yescarta) is only available only through a restricted program under a Risk Evaluation and Mitigation Strategy (REMS) called the YESCARTA and TECARTUS REMS. Contact Yescarta REMS at [www.YescartaTecartusREMS.com](http://www.YescartaTecartusREMS.com) or 1-844-454-5483.

### Brexucabtagene Autoleucel (Tecartus)

TECARTUS is a CD19-directed genetically modified autologous T cell immunotherapy indicated for the treatment of adult patients (18 years of age and above) with relapsed or refractory mantle cell lymphoma (MCL).

The Member's previous treatments must have included, but are not limited to, all of the following:

- a. Anthracycline or bendamustine-containing chemotherapy; and
  - b. Anti-CD20 monoclonal antibody therapy (e.g. rituximab); and
  - c. Bruton's tyrosine kinase inhibitor (BTKi) therapy (e.g. ibrutinib, acalabrutinib, zanubrutinib)
- Member must present CD19 tumor expression.
  - Member must not have received prior CD19-directed chimeric antigen receptor (CAR) T-cell therapy.
  - Member must not have evidence of active infection or inflammatory disorders
  - Brexucabtagene autoleucel is available only through a restricted program under a Risk Evaluation and Mitigation Strategy (REMS) called the YESCARTA and TECARTUS REMS Program. Information is available at [www.YescartaTecartusREMS.com](http://www.YescartaTecartusREMS.com) or 1-844-454-KITE (5483)

### Lisocabtagene maraleucel (Breyanzi)

BREYANZI is a CD19-directed genetically modified autologous T cell immunotherapy indicated for the treatment of adult patients with relapsed or refractory large B-cell lymphoma after two or more lines of systemic therapy, including diffuse large B-cell lymphoma (DLBCL) not otherwise specified (including DLBCL arising from indolent lymphoma), high-grade B-cell lymphoma, primary mediastinal large B-cell lymphoma, and follicular lymphoma grade 3B.

- Delay lisocabtagene maraleucel infusion if patient has unresolved serious adverse reaction from preceding chemotherapies, active uncontrolled infection, or active graft versus host disease (GVHD).
- Member must present CD19 tumor expression.

## PA.216.CC Car-T Therapy

Policy Number: PA.216.CC  
Last Review Date: 07/27/2021  
Effective Date: 10/12/2021

- Member must not have received prior CD19-directed chimeric antigen receptor (CAR) T-cell therapy.
- Lisocabtagene maraleucel (Breyanzi(R)) is only available only through a restricted program under a Risk Evaluation and Mitigation Strategy (REMS) called the BREYANZI REMS. Contact BREYANZI REMS at [www.BreyanziREMS.com](http://www.BreyanziREMS.com) or 1-888-423-5436.

### Idecabtagene vicleucel (Abecma)

ABECMA is a B-cell maturation antigen (BCMA)-directed genetically modified autologous T cell immunotherapy indicated for the treatment of adult patients with relapsed or refractory multiple myeloma after four or more prior lines of therapy, including an immunomodulatory agent, a proteasome inhibitor, and an anti-CD38 monoclonal antibody.

- Delay idecabtagene vicleucel for up to 7 days if patient has unresolved serious adverse events (especially pulmonary events, cardiac events, or hypotension), including those after preceding chemotherapies or if patient has active infections or inflammatory disorders.
- Member must not have received prior chimeric antigen receptor (CAR) T-cell therapy.
- Idecabtagene vicleucel is available only through a restricted program under a Risk Evaluation and Mitigation Strategy (REMS) called the ABECMA REMS. Contact ABECMA REMS at [www.AbecmaREMS.com](http://www.AbecmaREMS.com) or contact Bristol-Myers Squibb at 1-888-423-5436.

### Limitations

1. KYMRIAHA is not indicated for treatment of patients with primary central nervous system lymphoma.
2. YESCARTA is not indicated for the treatment of patients with primary central nervous system lymphoma.
3. TECARTUS is not indicated for the treatment of patients with primary central nervous system lymphoma.
4. BREYANZI is not indicated for the treatment of patients with primary central nervous system lymphoma.
5. Car-T Therapy is authorized once per lifetime.
6. The treating facility is certified under the Risk Evaluation and Mitigation Strategy (REMS) System program appropriate to requested CAR-T product.

### Codes

CPT and HCPCS codes covered when the above indications are met	
Code	Description
0537T	Chimeric antigen receptor T-cell (CAR-T) therapy; harvesting of blood-derived T lymphocytes for development of genetically modified autologous CAR-T cells, per day

## PA.216.CC Car-T Therapy

Policy Number: PA.216.CC  
Last Review Date: 07/27/2021  
Effective Date: 10/12/2021

0538T	Chimeric antigen receptor T-cell (CAR-T) therapy; preparation of blood-derived T lymphocytes for transportation (e.g., cryopreservation, storage)
0539T	Chimeric antigen receptor T-cell (CAR-T) therapy; receipt and preparation of CAR-T cells for administration
0540T	Chimeric antigen receptor T-cell (CAR-T) therapy; CAR-T cell administration, autologous
C9076	Lisocabtagene maraleucel, up to 110 million autologous anti-CD19 CAR-positive viable T cells, including leukapheresis and dose preparation procedures, per therapeutic dose
J3590	Unclassified biologics
J9999	Not otherwise classified, antineoplastic drugs
Q2041	Axicabtagene ciloleucel, up to 200 million autologous anti-CD19 car positive viable T cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Q2042	Tisagenlecleucel, up to 600 million car-positive viable T cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Q2053	Brexucabtagene autoleucel, up to 200 million autologous anti-CD19 CAR positive viable T cells, including leukapheresis and dose preparation procedures, per therapeutic dose
S2107	Adoptive immunotherapy i.e. development of specific antitumor reactivity (e.g., tumor-infiltrating lymphocyte therapy) per course of treatment
