

## **County Care Health Plan Medicaid Formulary**

The Formulary is up to date through its effective date of January 1, 2022. Please notify County Care Health Plan at: [CountyCarePharmacy@cookcountyhhs.org](mailto:CountyCarePharmacy@cookcountyhhs.org) or 1-888-402-1982 with any mistakes in the formulary.

## **INTRODUCTION**

We are pleased to provide the County Care Health Plan Medicaid Formulary as a useful reference and information tool. This document can assist medical providers in selecting clinically-appropriate and cost-effective products for their patients.

The drugs represented have been reviewed by a National Pharmacy and Therapeutics (P&T) Committee and are approved for inclusion. The document is reflective of current medical practice as of the date of review.

The information contained in this document and its appendices are provided solely for the convenience of medical providers. We do not warrant or assure accuracy of such information, nor is it intended to be comprehensive in nature. This document is not intended to be a substitute for the knowledge, expertise, skill and judgement of the medical provider in his or her choice of prescription drugs. All the information in the document is provided as a reference for drug therapy selection. Specific drug selection for an individual patient rests solely with the prescriber.

The document is subject to state-specific regulations and rules, including but not limited to, those regarding generic substitution, controlled substance schedules, preference for brands and mandatory generics whenever applicable.

We assume no responsibility for the actions or omissions of any medical provider based upon reliance, in whole or in part, on the information contained herein. The medical provider should consult the drug manufacturer's product literature or standard references for more detailed information.

## **PREFACE**

The document is organized by sections. Each section is divided by therapeutic class primarily defined by mechanism of action. Products are listed by generic name and brand name. Unless the cited drug is available as an injectable or an exception is specifically noted, generally, all applicable dosage forms and strengths of the drug cited are included in the document.

## **FORMULARY (PHARMACEUTICAL) MANAGEMENT PROCEDURES**

The Health Plan Pharmacy Department annually and after updates, communicates changes to members, prescribing practitioners, and pharmacies. Updates include lists of pharmaceutical restrictions and preferences, as well as explanations of limits and quotas.

## **PHARMACY AND THERAPEUTICS (P & T) COMMITTEE**

The services of an independent National Pharmacy and Therapeutics Committee ("P&T Committee") are utilized to approve safe and clinically effective drug therapies. The P&T Committee is an external advisory body of clinical professionals from across the United States. The P&T Committee voting members include physicians, pharmacists, a pharmacoeconomist and a medical ethicist, all of whom have a broad background of clinical and academic expertise regarding prescription drugs. Voting members of the P&T Committee must disclose any financial relationship or conflicts of interest with any pharmaceutical manufacturers.

## **GENERIC SUBSTITUTION**

Generic substitution is a pharmacy action whereby a generic version is dispensed rather than a prescribed brand name product. In most instances, a brand name drug for which a generic product becomes available will become non-formulary, with the generic product covered in its place, upon release of the generic product onto the market. However, the document is subject to state specific regulations and rules regarding generic substitution and mandatory generic rules apply where appropriate.

Generic drugs are usually priced lower than their brand-name equivalents. Prescription generic drugs are:

- Approved by the U.S. Food and Drug Administration (FDA) for safety and effectiveness and are manufactured under the same strict standards that apply to brand name drug.
- Tested in humans to assure the generic is absorbed into the bloodstream in a similar rate and extent compared to the brand name drug (bioequivalence). Generics may be different from the brand in size, color, and inactive ingredients, but this does not alter their effectiveness or ability to be absorbed just like the brand name drug.
- Manufactured in the same strength and dosage form as the brand name drugs.

When a generic drug is substituted for a brand name drug, you can expect the generic to produce the same clinical effect and safety profile as the brand name drug (therapeutic equivalence).

**AGE LIMIT (AL)** Age Limits are used to make certain that medications are used according to the FDA's recommendation for the use of the medication dependent on the age of the patient.

**PRIOR AUTHORIZATION (PA)** Requires the approval of certain medications to ensure appropriateness, based on clinical evidence. This additional step guarantees that the prescription is medically necessary when a clinically effective less expensive option is available. The PA will be approved if the patient's condition meets the necessary requirements.

## **QUANTITY LIMITS (QL)**

Quantity limits are designed to limit the use of selected drugs for quality and safety reasons. The quantity limit for FDA supports each drug recommended dosing guidelines. An exception request is required to exceed quantity limits.

## **STEP THERAPY (ST)**

Step Therapy is the practice of beginning drug therapy for a medical condition with drugs considered first-line for safety and cost effectiveness, then progressing to other drugs that may have more side effects or are more costly.

## **SPECIALTY PLAN DESIGN**

Specialty Pharmacy Management is our utilization program that helps ensure appropriate utilization of specialty medications based on currently accepted evidence-based medicine guidelines. The utilization management program is available for all therapeutic areas dispensed by our specialty pharmacies. Specialty Pharmacy Management is designed to help ensure safety and efficacy while preventing off-guideline utilization.

## **PLAN DESIGN**

The document represents a closed formulary plan design. The medications listed on the document are covered by the plan as represented. Certain medications on the list are covered if utilization management criteria are met (i.e. Step Therapy, Prior authorization, Quantity Limits, etc.); requests for use of such medication outside of their listed criteria will be reviewed for medical necessity. If a medication is not listed on the document, a formulary exception may be requested for coverage. Medical necessity or formulary exception requests will be reviewed based on drug specific prior authorization criteria or standard non-formulary prescription request criteria.
